

GET jobs/?jobid=jobid | Experimental API for AI services

 useapi.net/docs/api-v2/get-jobs-jobid

1. [Midjourney API v2](#)
2. GET jobs/?jobid=[jobid](#)

Retrieve job status and results

December 2023 (September 1, 2025)

Table of contents

1. [Request Headers](#)
2. [Query Parameter](#)
3. [Responses](#)
4. [Model](#)
5. [Examples](#)
6. [Try It](#)

Use this endpoint to retrieve status and results of

- [jobs/imagine](#)
- [jobs/button](#)
- [jobs/blend](#)
- [jobs/describe](#)
- [jobs/info](#)
- [jobs/relax](#)
- [jobs/fast](#)
- [jobs/turbo](#)
- [jobs/variability](#)
- [jobs/remix](#)
- [jobs/seed_async](#)

If you specified optional parameter `replyUrl` you technically do not need to use this endpoint to retrieve results since API will call provided `replyUrl` once job generation completed.

Important The API checks Discord periodically - every 15 seconds (and up to 60 seconds in rare cold start cases) - to update the statuses and results of all currently running jobs. This polling interval is set for safety reasons to help prevent issues with Discord and Midjourney,

such as bans or excessive request rates.

Jobs lifespan guaranteed to be at least 31 days, after that they will be expired and may be recycled.

| <https://api.useapi.net/v2/jobs/?jobid=jobid>

Request Headers

Authorization: Bearer {API token}

API token is required, see [Setup useapi.net](#) for details.

Query Parameter

jobid is required, use the value returned by the following jobs:

- [jobs/imagine](#)
- [jobs/button](#)
- [jobs/blend](#)
- [jobs/describe](#)
- [jobs/seed_async](#)

You can also retrieve results for the jobs listed below, even though they will return the final result with the original call:

- [jobs/info](#)
- [jobs/relax](#)
- [jobs/fast](#)
- [jobs/turbo](#)
- [jobs/variability](#)
- [jobs/remix](#)

Responses

- [200](#)
- [400](#)
- [401](#)
- [402](#)
- [404](#)
- [410](#)

[200 OK](#)

If field `status` value is *created*, *started* or *progress* wait in a loop for **at least** 10..30 seconds and retry again. When completed retrieve generated image from `attachments` field. If you're planning to take advantage of Discord CDN to host attachments, take a look at our [Discord CDN Proxy](#) article.

Field `content` contains message generated by Midjourney reflecting current generation parameters and progress.

Optional array `embeds` contains additional information.

Optional array `imageUx` contains separate image URLs to the upscaled images where available.

Optional array `imageUx` contains separate video URLs to the upscaled videos where available.

To retrieve `imageUx` and `videoUx` URLs, use [GET proxy/cdn-midjourney](#). Both URLs are behind CloudFlare, and unless you plan to display them as part of an HTML page served via a standard browser context, you will need to use the provided proxy above to download those images and videos.

⚠ Security consideration when using `videoUx` and `imageUx` URLs:

URLs in both arrays follow this format: <https://cdn.midjourney.com/<GUID>/...>.

They contain a job GUID which can be traced back to your account and will expose your account details such as your Discord account name and email.

Exercise caution when posting these URLs publicly. You may want to save the URL content locally and serve it from your own origin, or proxy the links to obfuscate the original URLs.
