Use this endpoint to submit the Midjourney [/relax](#) command to your [Discord Midjourney channel](#).

| <https://api.useapi.net/v2/jobs/relax>

Request Headers

Authorization: Bearer {API token}
Content-Type: application/json

[API token](#) is required, see [Setup useapi.net](#) for details.

Request Body

```
{  
  "channel": "Discord channel id",  
  "replyUrl": "Place your call back URL here",  
  "replyRef": "Place your reference id here"  
}
```

- [channel](#) is optional if only one Midjourney account configured under [account/midjourney](#).

You may specify the [channel](#) when you have multiple [account/midjourney](#) accounts setup at wish to use a specific account from the configured list at [account/midjourney](#).

- **replyUrl** is optional, if not provided value from [useapi.net account](#) will be used.
Place here your callback URL. API will call the provided **replyUrl** once job completed or failed.
Maximum length 1024 characters.
We recommend using sites like [webhook.site](#) to test callback URL functionality.
- **replyRef** is optional, place here your reference id which will be stored and returned along with this job response / result.
Maximum length 1024 characters.

  "replyUrl": "https://webhook.site/abc",
  "replyRef": "<your optional reference id>",
  "messageId": "<Discord message id>",
  "timestamp": "2023-09-09T02:04:52.774000+00:00",
  "content": "Done! Your jobs now do not consume fast-hours, but might take a little longer. You can always switch back with `/fast`",
  "code": 200
}
```

Model

```
{ // TypeScript, all fields are optional
  jobid: string,
  verb: 'relax',
  status: 'completed' | 'failed',
  created: string, // YYYY-MM-DDTHH:mm:ss.sssZ, ISO 8601, UTC
  updated: string, // YYYY-MM-DDTHH:mm:ss.sssZ, ISO 8601, UTC
  discord: string, // Provided for debugging purposes only, contains the first 3 and
the last 3 characters of the original value
  channel: string,
  replyUrl: string,
  replyRef: string,
  messageId: string,
  content: string,
  timestamp: string,
  error: string,
  errorDetails: string,
  code: number
}
```

Examples

- [Curl](#)
- [JavaScript](#)
- [Python](#)

```
curl -H "Accept: application/json" \
      -H "Content-Type: application/json" \
      -H "Authorization: Bearer ..." \
      -X POST https://api.useapi.net/v2/jobs/relax \
      -d '{"channel": "..."}'
```
