

Midjourney API v2

[API](#) useapi.net/docs/api-v2

December 2023 (September 12, 2025)

This is an [experimental](#) API for the [Midjourney Discord Bot](#) by [Midjourney](#).

Since its initial release in early 2023, our experimental API has provided pure and unrestricted access to the Midjourney Discord Bot, allowing you to utilize its full potential. The **entire** Midjourney Discord Bot functionality, including **video generation**, is supported, as well as retrieval of [seed](#), support for [variations mode](#), [remix mode](#), and everything else the Midjourney Discord Bot offers. Think of our experimental API as a smart proxy for your Midjourney Discord bot.

Our experimental API uses intelligent logic to prevent potential issues with Discord and Midjourney, such as bans, CAPTCHA challenges, or excessive requests.

We fully support the ability to use [multiple Midjourney accounts](#), complete with automated load balancing.
